Doctor-Patient Relationship in Chiropractic

It is important to be an aware and informed patient. We have found that an understanding of chiropractic care is helpful. This page is to help inform you of what will be happening today and throughout your care.

Analysis: You will receive a chiropractic examination for the detection of vertebral Subluxations. A vertebral Subluxations is a misalignment of one or more of the 24 vertebra in the spinal column that causes obstruction of nerve function and interference to the transmission of mental impulses, resulting in a lessening of the body's natural ability to express its maximum health potential.

During the examination, the chiropractor will evaluate how your spine moves and what it feels like. Based upon the results of the examination, X-rays of your spine may be taken. X-rays will tell the doctor how far and in what direction the vertebra is misaligned. The X-rays will also help determine the most efficient chiropractic techniques to effectively adjust and correct the spine.

Diagnosis: Only a chiropractor can determine if your case is a chiropractic case. Your diagnosis will reflect spinal nerve interference that is caused by vertebral Subluxations. Our doctors will work with any other health care provider for your benefit. Also, you should expect other health care providers to work with your chiropractor for your benefit. This team approach to your health care will serve you the best.

Chiropractic Adjustments: By coming to the chiropractor for care, you give the chiropractor permission to adjust you. In rare cases, physical defects, deformities, or pathology may render the patient susceptible to injury. The chiropractor will not provide chiropractic adjustments if he is aware of any such conditions. If the patient is aware of any latent pathological defects, illness or deformities that would not otherwise come to the attention of the chiropractor, it is the patient's responsibility to notify the chiropractor. A chiropractor does not treat or diagnosis disease. The chiropractor provides a specialized health service for the detection and correction of vertebral Subluxations. Upon request, alternatives to chiropractic care and any risks regarding chiropractic care will be explained.

Results: The goal of chiropractic is to adjust vertebral Subluxations for the purpose of allowing the proper transmission of nerve energy over nerve pathways so that every part of the body may have a proper nerve supply at all times. This allows the natural healing ability of the body to work at maximum efficiency. Since there are many variables, it is difficult to predict the time schedule or results of chiropractic care. The healing process takes time. The longer the problem has been in the body, the longer the healing process will take.

Questions: We want to help you achieve your goal of health. Any time your progress is not satisfactory or you have any concerns, the chiropractor will gladly answer any questions that arise or assist you in choosing a referral doctor for another opinion. Your health is our number one priority.

Acknowledgment: I have read and understand the above.
